## **INTRODUCTION**

Iranian Petroleum standards (IPS) have been prepared on the basis of the recognized standards, scientific publications, technical documents, accumulated knowledge and experiences in petroleum industries at national and international levels.

The history of the standards in oil industries goes back to early 70's. In those years, the first collection of standards were, equipment standards for Abadan Refinery and onshore installations, in south of Iran.

Later, gradually oil industry got bigger, and bigger, and gas and petrochemical industries were developed. These industries created a collection of standards for their own use and naturally there were no harmony between the standards prepared by the new developed industries with that of the oil industry.

In order to unify all the standards in the whole ministry of petroleum, an organization called department of standards was set up which operates under deputy minister in engineering and local manufacturing.

This organization has issued uniform standards for the whole hydrocarbon industries called Iranian Petroleum Standards (IPS) since 1989.

Iranian Petroleum Standards are periodically reviewed and amended by the relevant technical committees in order to incorporate the views and the comments made by Oil, Gas, Petrochemical and National Iranian Oil Refining & Distribution Company experts.

These Standards have been prepared in 12 technical branches, each in 5 topic groups of Engineering (E), Material (M) Construction (C), Periodical Inspection (I) and general (G). By insertion of General Machinery into General in 2005, now these Standards are in 11 technical branches.

In addition to the above mentioned standard literatures, standard drawings have also been prepared in 7 topic groups.

These publications may not cover every requirement or diversity of condition at each locality, but the system is sufficiently flexible to allow individual operating companies to exercise their own judgment for their own situation.

So far, 373 text for standards plus 188 standard drawings have been prepared.

All these documents are transferred on to CD under Windows operating system and will be available upon request.

At present all these Standards are in the process of being updated by the relevant technical committees.

Standards Organization welcomes any suggestion and/or comment from technical bodies and experts for improvement of the quality of these Standards.

Comments and/or recommendations, will be studied and evaluated by the relevant technical committees, and will be incorporated in the next revision of the concerned standards.

Comments shall be sent in writing to the director of Standards Organization.

**SCOPE**

This INDEX lists the IPS Standards and Standard Drawings on the date of issue of this document. They are listed by subject. 373 standards and 188 standard drawings are separately listed. updates, of this INDEX is issued yearly to all registered recipients and is available otherwise on request.

In the subject index, in addition to the standard title, the number of pages and the STATUS of each standard are given. The position of any standard, if amended, revised or withdrawn will be shown in the subject index.

**STANDARD HIGH COUNCIL (SHC)**

The Standard High Council is the senior policy making body of which the members are as follow:

- Deputy of Engineering
- Manufacturing Support and Procurement Kala Naft
- National Iranian South Oil Company
- National Iranian Gas Company
- National Petrochemical Company
- National Iranian Oil Engineering and Construction Company

The SHC meets at least once a year for setting the philosophy and directing the activities of the Organization. Additionally SHC gives final endorsement for introducing the new standards or withdrawal of the old standards.

The SHC do not specifically approve the technical content. This is the responsibility of the Standards Organization. It is the responsibility of the user of a document to ensure that it is appropriate for a particular application.

**TECHNICAL COMMITTEE**

The Iranian Petroleum Standards are developed and maintained by a number of technical committees. There are at present 11 such committees each representing one of the 11 fields or disciplines for which Standards are prepared.

**FEEDBACK**

Organizations and individuals who use the IPS Standards are encouraged and invited to contact Standard Organization as for any questions, suggestions and comments concerning the standards, which could lead to their improvement and updating.

Such feedbacks will assist materially in maintaining and enhancing the value of the document to users.

All feedback is kept on the document record file by Standard Organization for formal revision. The CUSTODIAN will review this file, and if the queries and feedbacks require urgent consideration, he will arrange for preparation of an AMENDMENT to the standard.

Feedback should be made in writing and addressed to the director of Standard Organization.

### **REQUIRMENT FOR REVISING IPS**

The various reason for which an IPS may require amendment/revision are described bellow:-

- Systematic review
- Change of regulations
- Change of national and/or international standard
- Findings of technical audits
- Change in Technology
- Commercial reason
- Other changes

### **SYSTEMATIC REVIEW**

In accordance with the IPS directives every standard shall subject to systematic review by the relevant T.C. about 5 years after publication. To determine whether it should be confirmed, amended, revised, converted to another form of deliverable, or withdrawn.

### **AMENDMENT**

During formal revisions, if a standard requires urgent consideration, the matter will be notified to the relevant TECHNICAL COMMITTEE. Should the query be approved by the technical committee, the custodian will prepare an amendment to the document and make it rapidly dispatched to all registered holders.

### **WITHDRAWAL**

Withdrawal of an IPS Standard happens when the standard is out-of-date and/or no longer needed. Following the approval for withdrawal, the registered holders of IPS will be notified by a circular, to which attention will be drawn to the withdrawn standards and it's replacements.

When applicable, the replaced standards will have the same IPS number as the withdrawn standard. The revision number will be shown in parenthesis.

The withdrawn Standards will not be supported by Standards Organization, and continuing the use of these Standards will be at local management discretion.

### **UP DATING**

The IPS Standards are in the process of being updated by the Standards Organization through technical committees

Standards Organization welcomes any suggestions and comments concerning these standards from technical bodies or experts for improvement of technical quality of these Standards.

Comments and/or recommendations are evaluated in the relevant technical committee, and will be considered in the next edition, upon approval.

Comments should be sent in writing addressed to the Standards Organization Director.

### **IPS STRUCTURE**

The Iranian Petroleum Standard have been prepared in 6 topic groups of the following:

- C Construction and Installation
- D Drawing
- E Engineering and Design
- G General (standards containing more than one type)
- I Inspection
- M Material and Equipment

To the field of activities as hereunder follows:

- AR Heating, Ventilation, Air Conditioning Cooling & Refrigeration
- CE Civil
- EL Electrical
- GN General
- IN Instrument
- ME Fixed Mechanical Equipment
- PI Piping & Pipelines
- PM Process Machineries
- PR Process & Chemical
- SF Safety, Fire Fighting & Environmental Pollution Control
- TP Technical Protection

**STANDARD FORMS**

The IPS Standards are prepared in electronic form which shows IPS Number with revision number in parenthesis and Issue date on the top right corner and Title of Standard at the center of the front cover.

The electronic forms of standards and standard drawings are available on CD, prepared by Adobe Acrobat under Windows.

All above documents are packed on a CD usable under windows XP or higher, available upon request.

**INDEXES**

The main section of this catalog is the list of standards and standard drawings classified by subject. The aim of this approach is to provide optimum possibilities for the selection of standards interrelated by their subjects.

Both indexes are updated regularly by including new information and will be published yearly. The edition date, indicated in this index is the date of the latest edition of each standard, which may be an original or a revised standard.
